

ETHICAL RESPONSES TO BIAS & HARM

Ethical AI is NOT Bias-Free AI

The goal is not to eliminate bias entirely but to:

- Detect it
- Reduce it
- Manage its impact responsibly

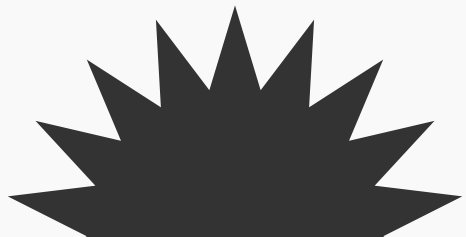

Bias-Free

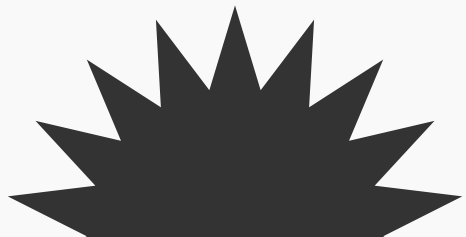

Bias Audits

- Regular testing across demographic groups
- Transparent reporting of disparities

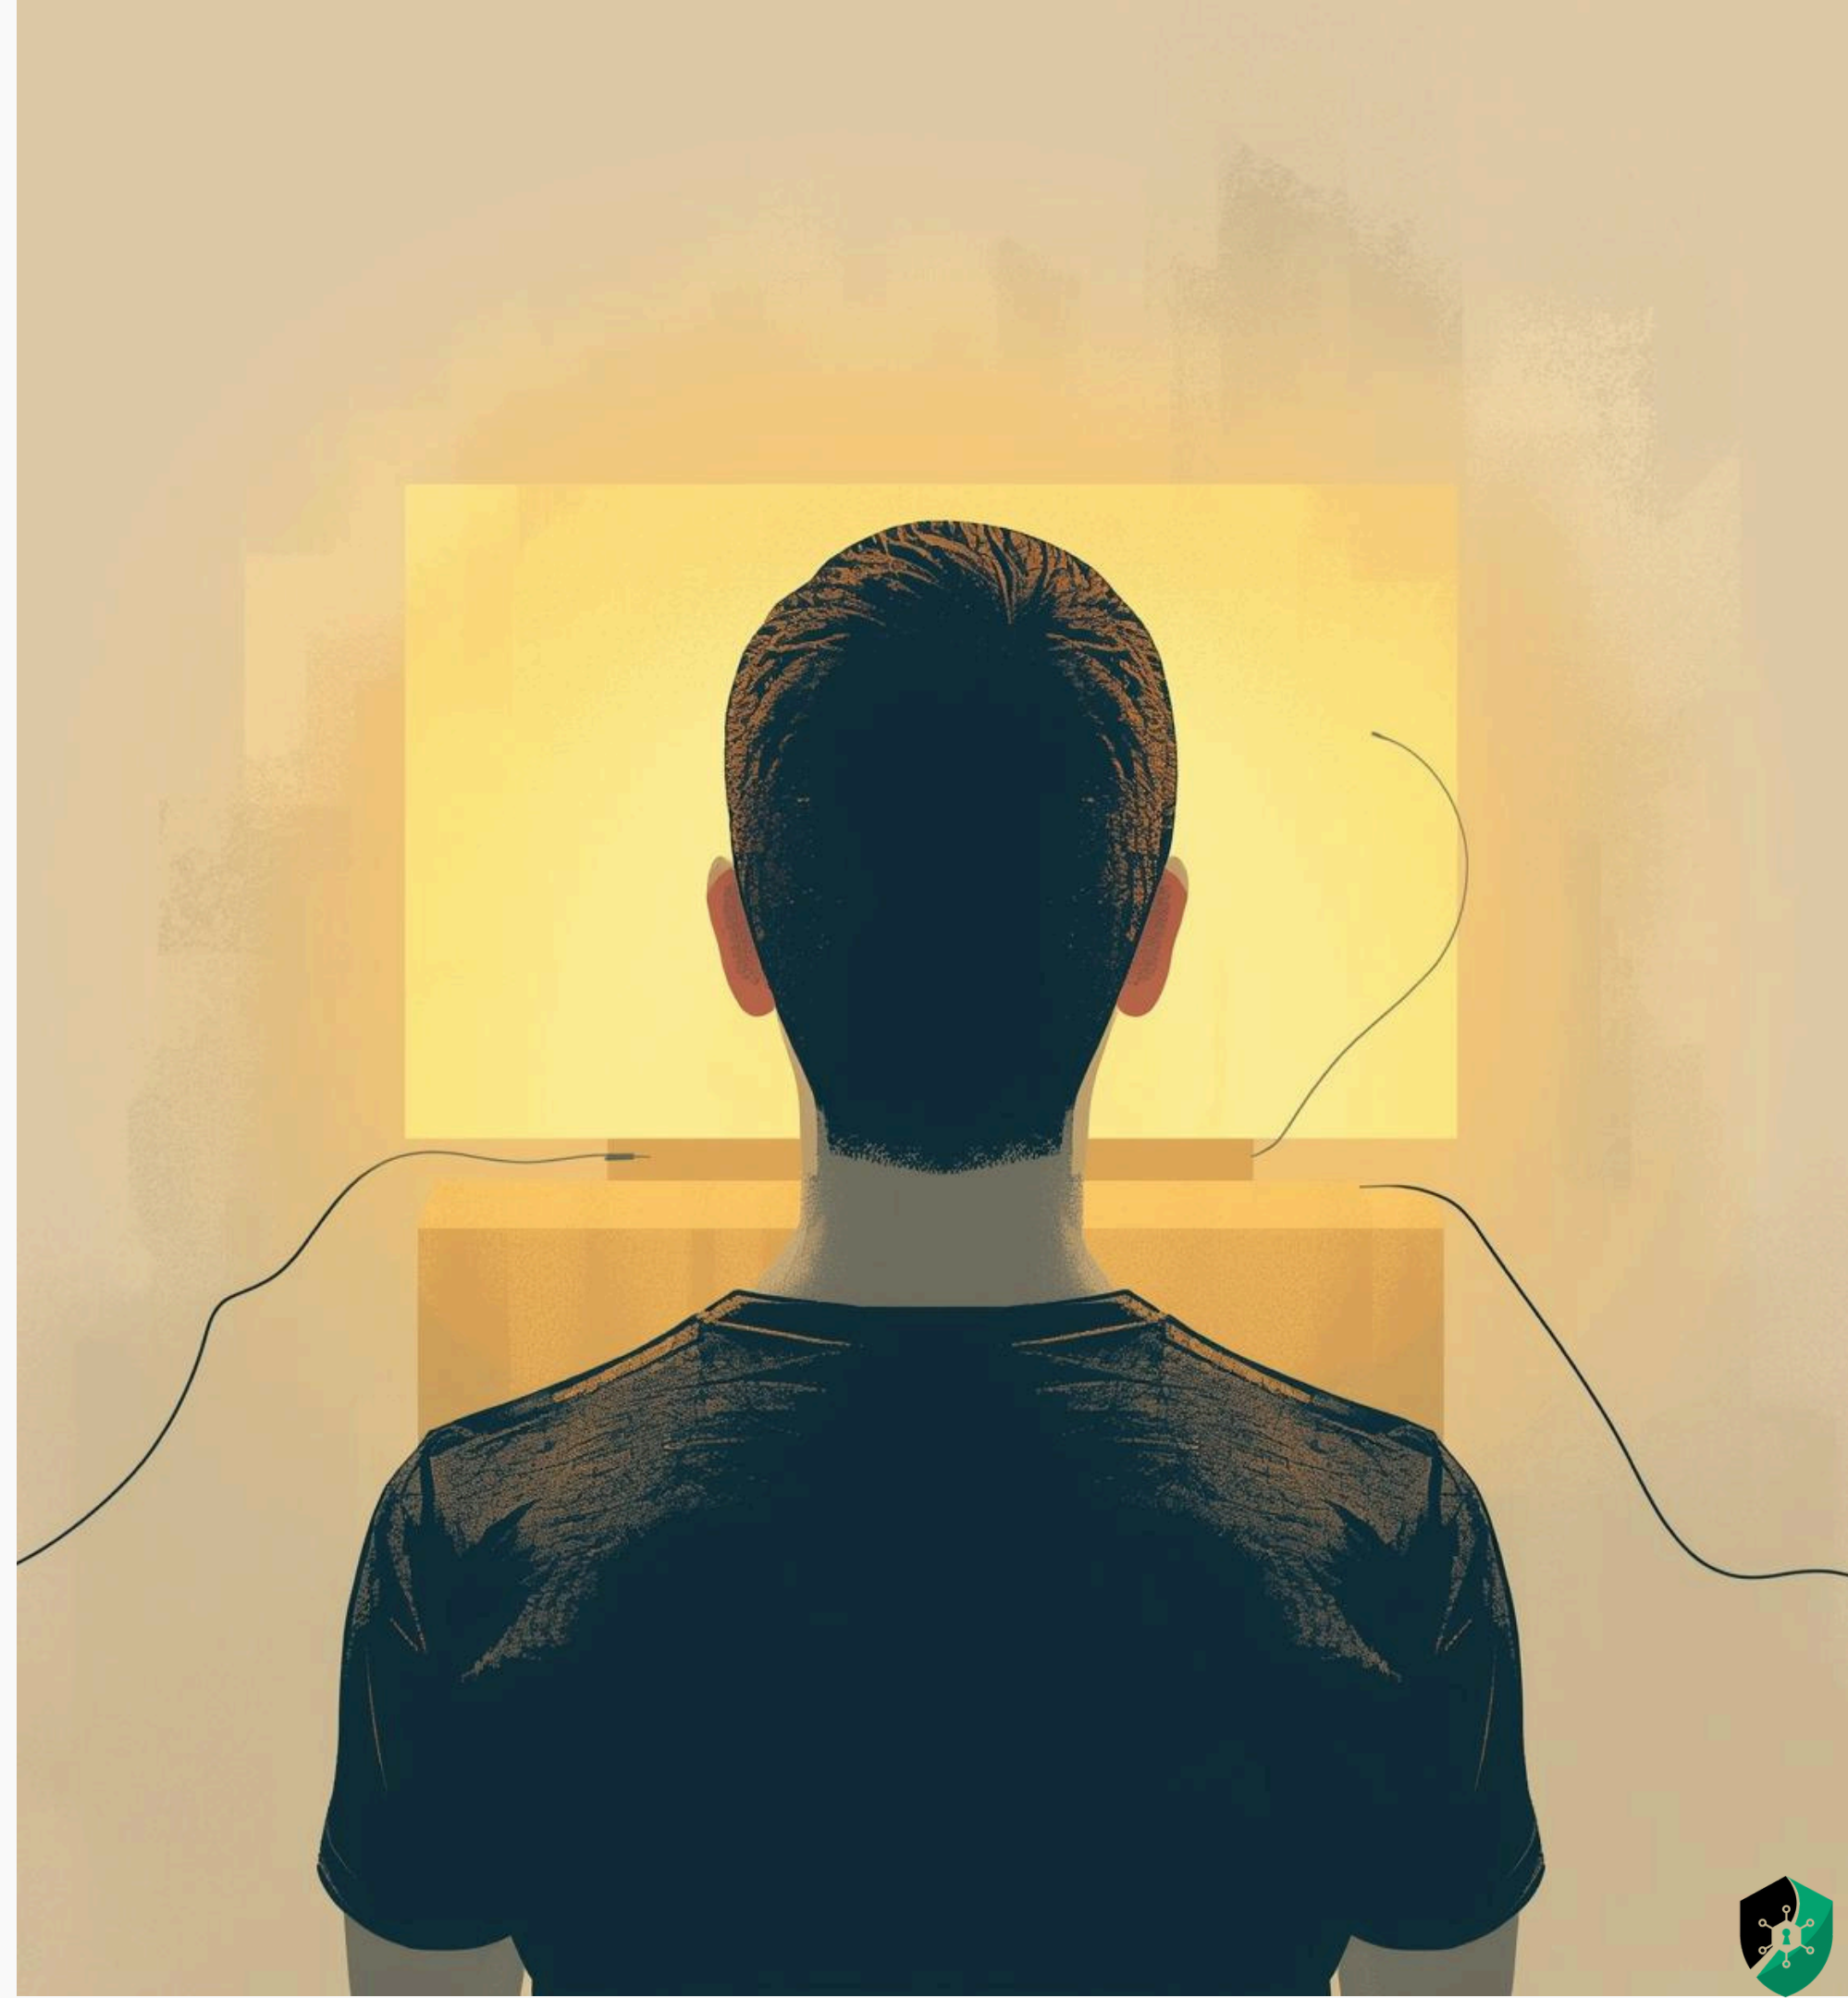

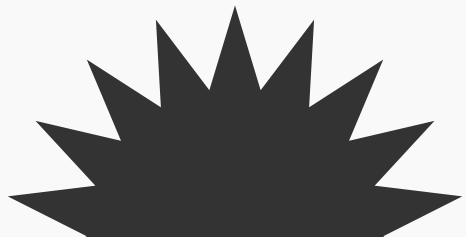

Diverse Design Teams

- Broader perspectives reduce blind spots
- Ethical risks are easier to identify early

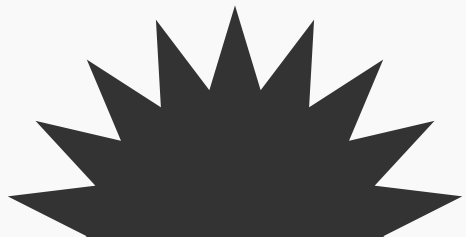

Human Oversight

- Humans must retain authority
- Especially in high-impact decisions

Clear Accountability

- Someone must be responsible for harm
- “The algorithm decided” is not an excuse

Right to Challenge

- Individuals must be able to question outcomes
- Appeals and corrections must exist
