

Creating Ethical Guidelines for AI Use

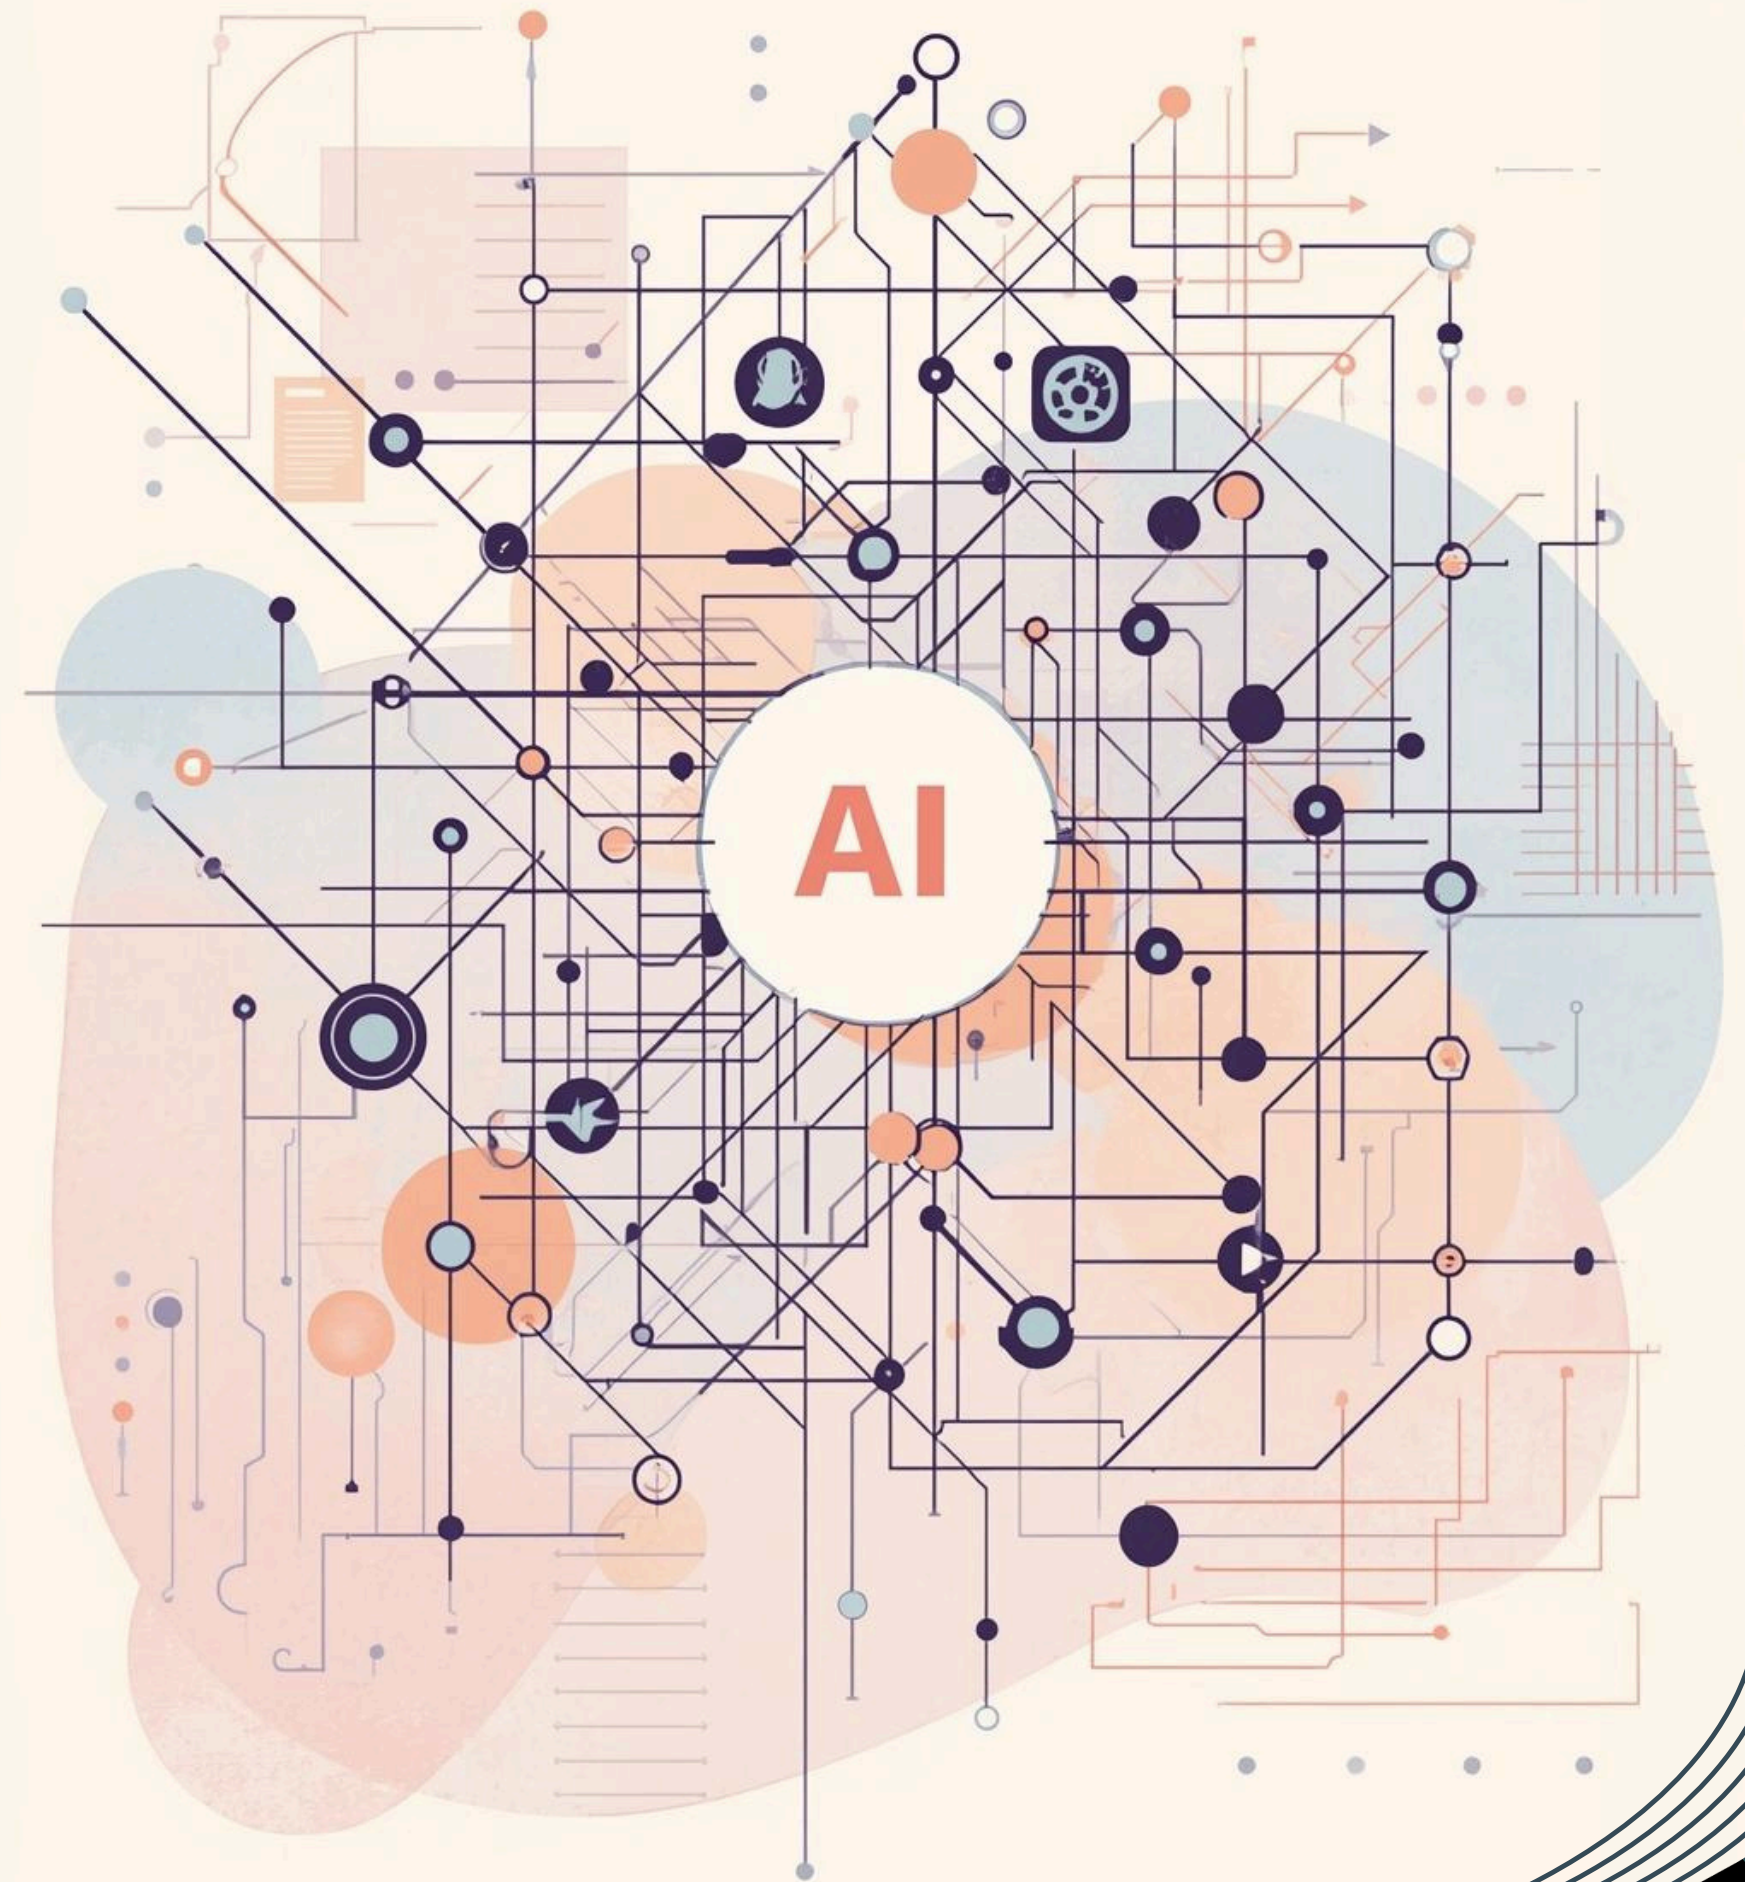

What Should AI Ethical Guidelines Include?

- Scope of Use
- Transparency Requirements
- Data Governance
- Human Oversight Rules
- Accountability Structure
- Incident Response Procedures

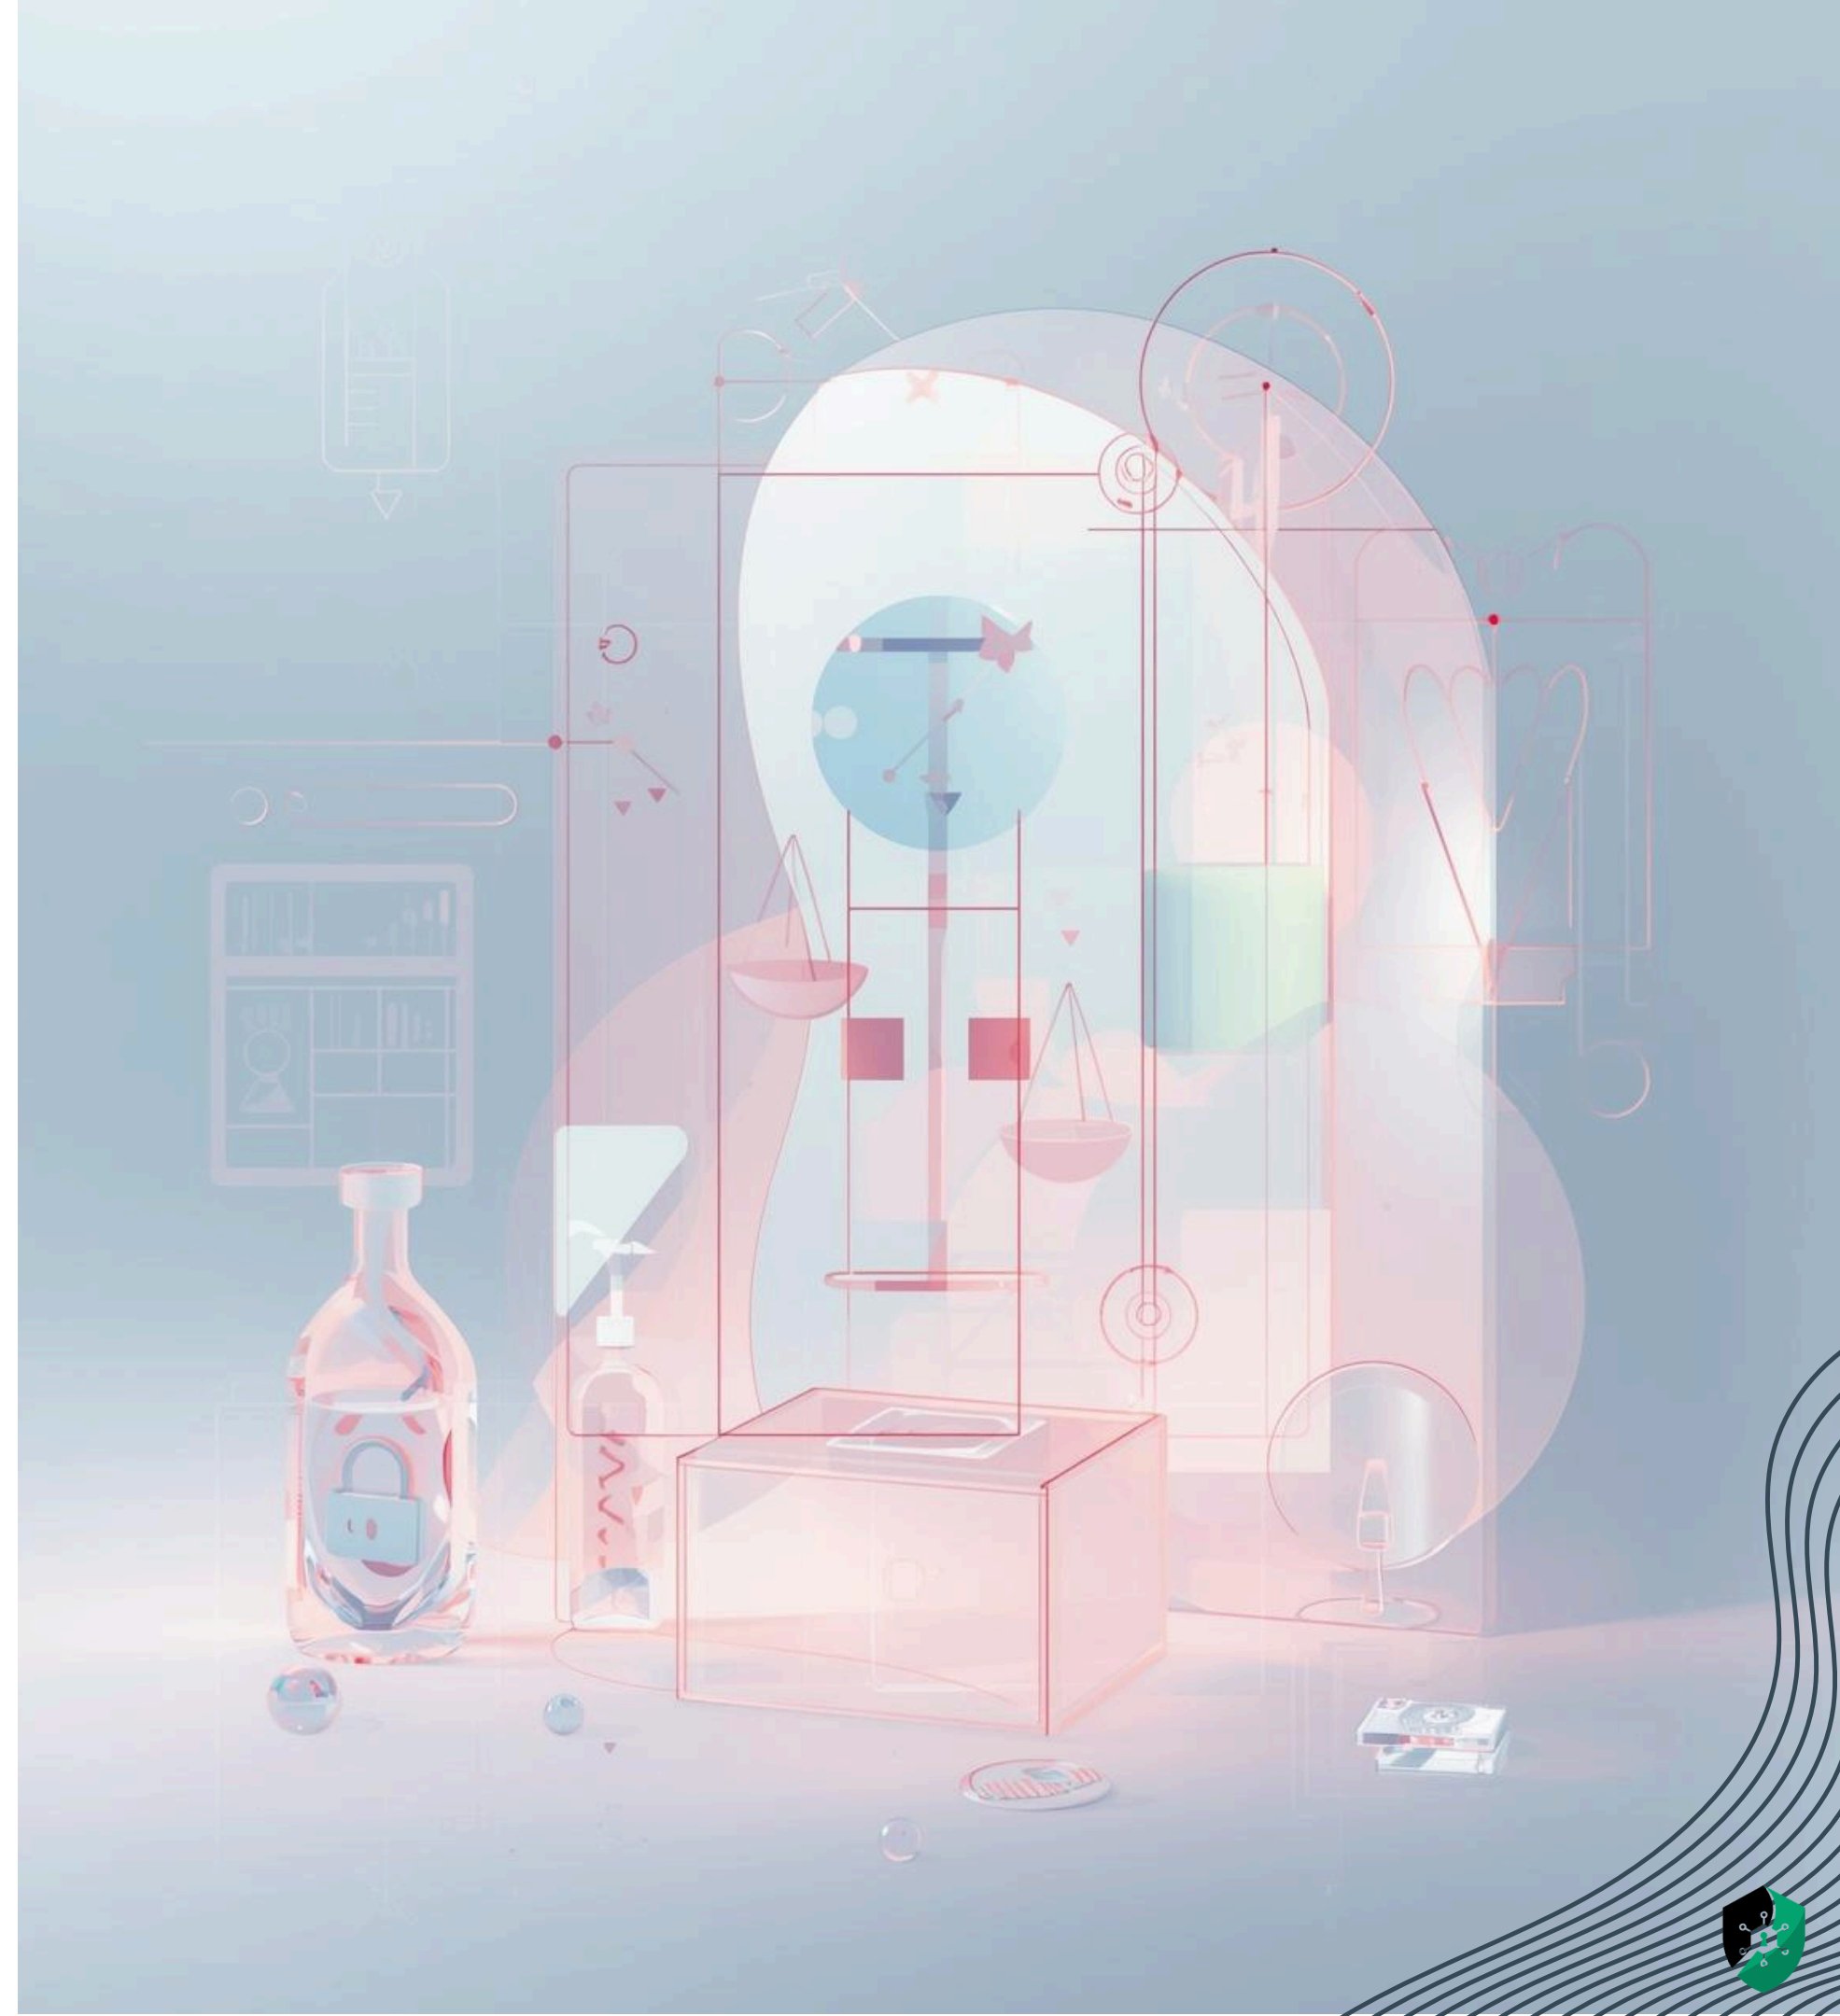

Scope of Use

- What systems are covered?
- What is prohibited?
- What requires approval?

Transparency Requirements

- Disclosure of AI use
- Explainability expectations
- User notification policies

Data Governance

- Data sourcing standards
- Consent requirements
- Bias evaluation protocols

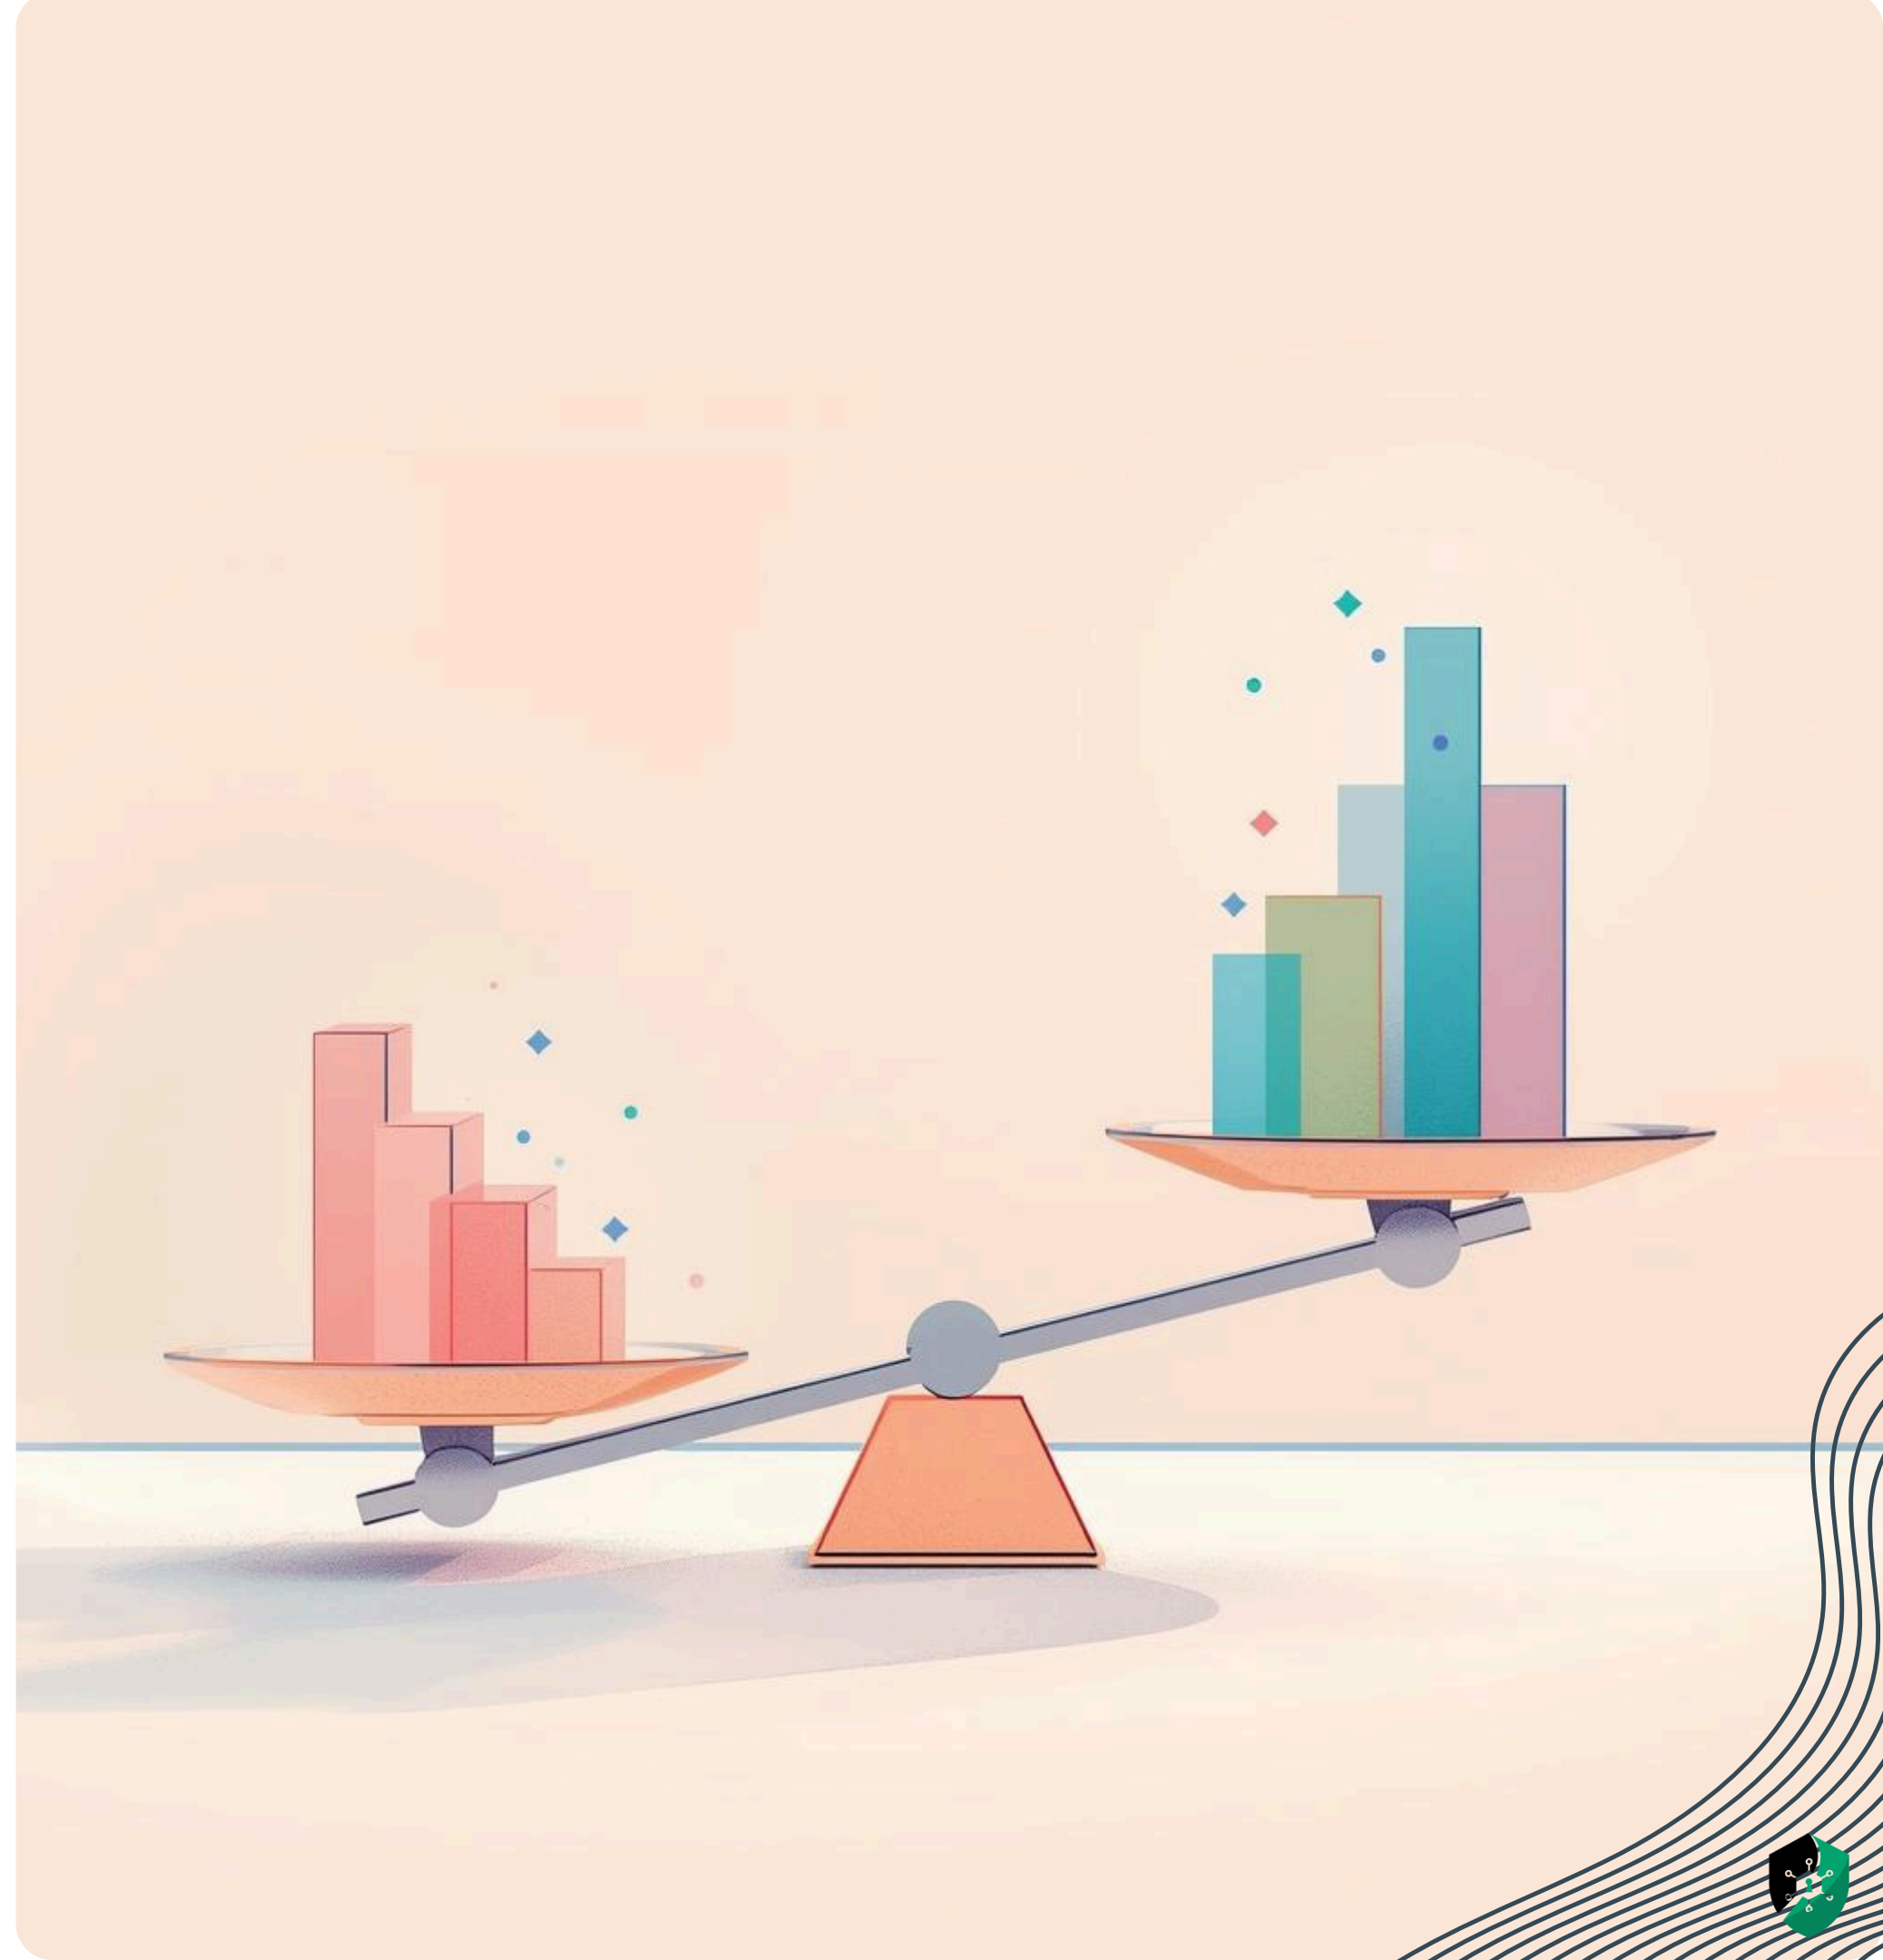

Human Oversight Rules

- When human review is mandatory
- Escalation pathways
- Override authority

Accountability Structure

- Who signs off?
- Who audits?
- Who owns failures?

Incident Response Procedures

If AI causes harm:

- How is it reported?
- How quickly is it investigated?
- Who communicates publicly?

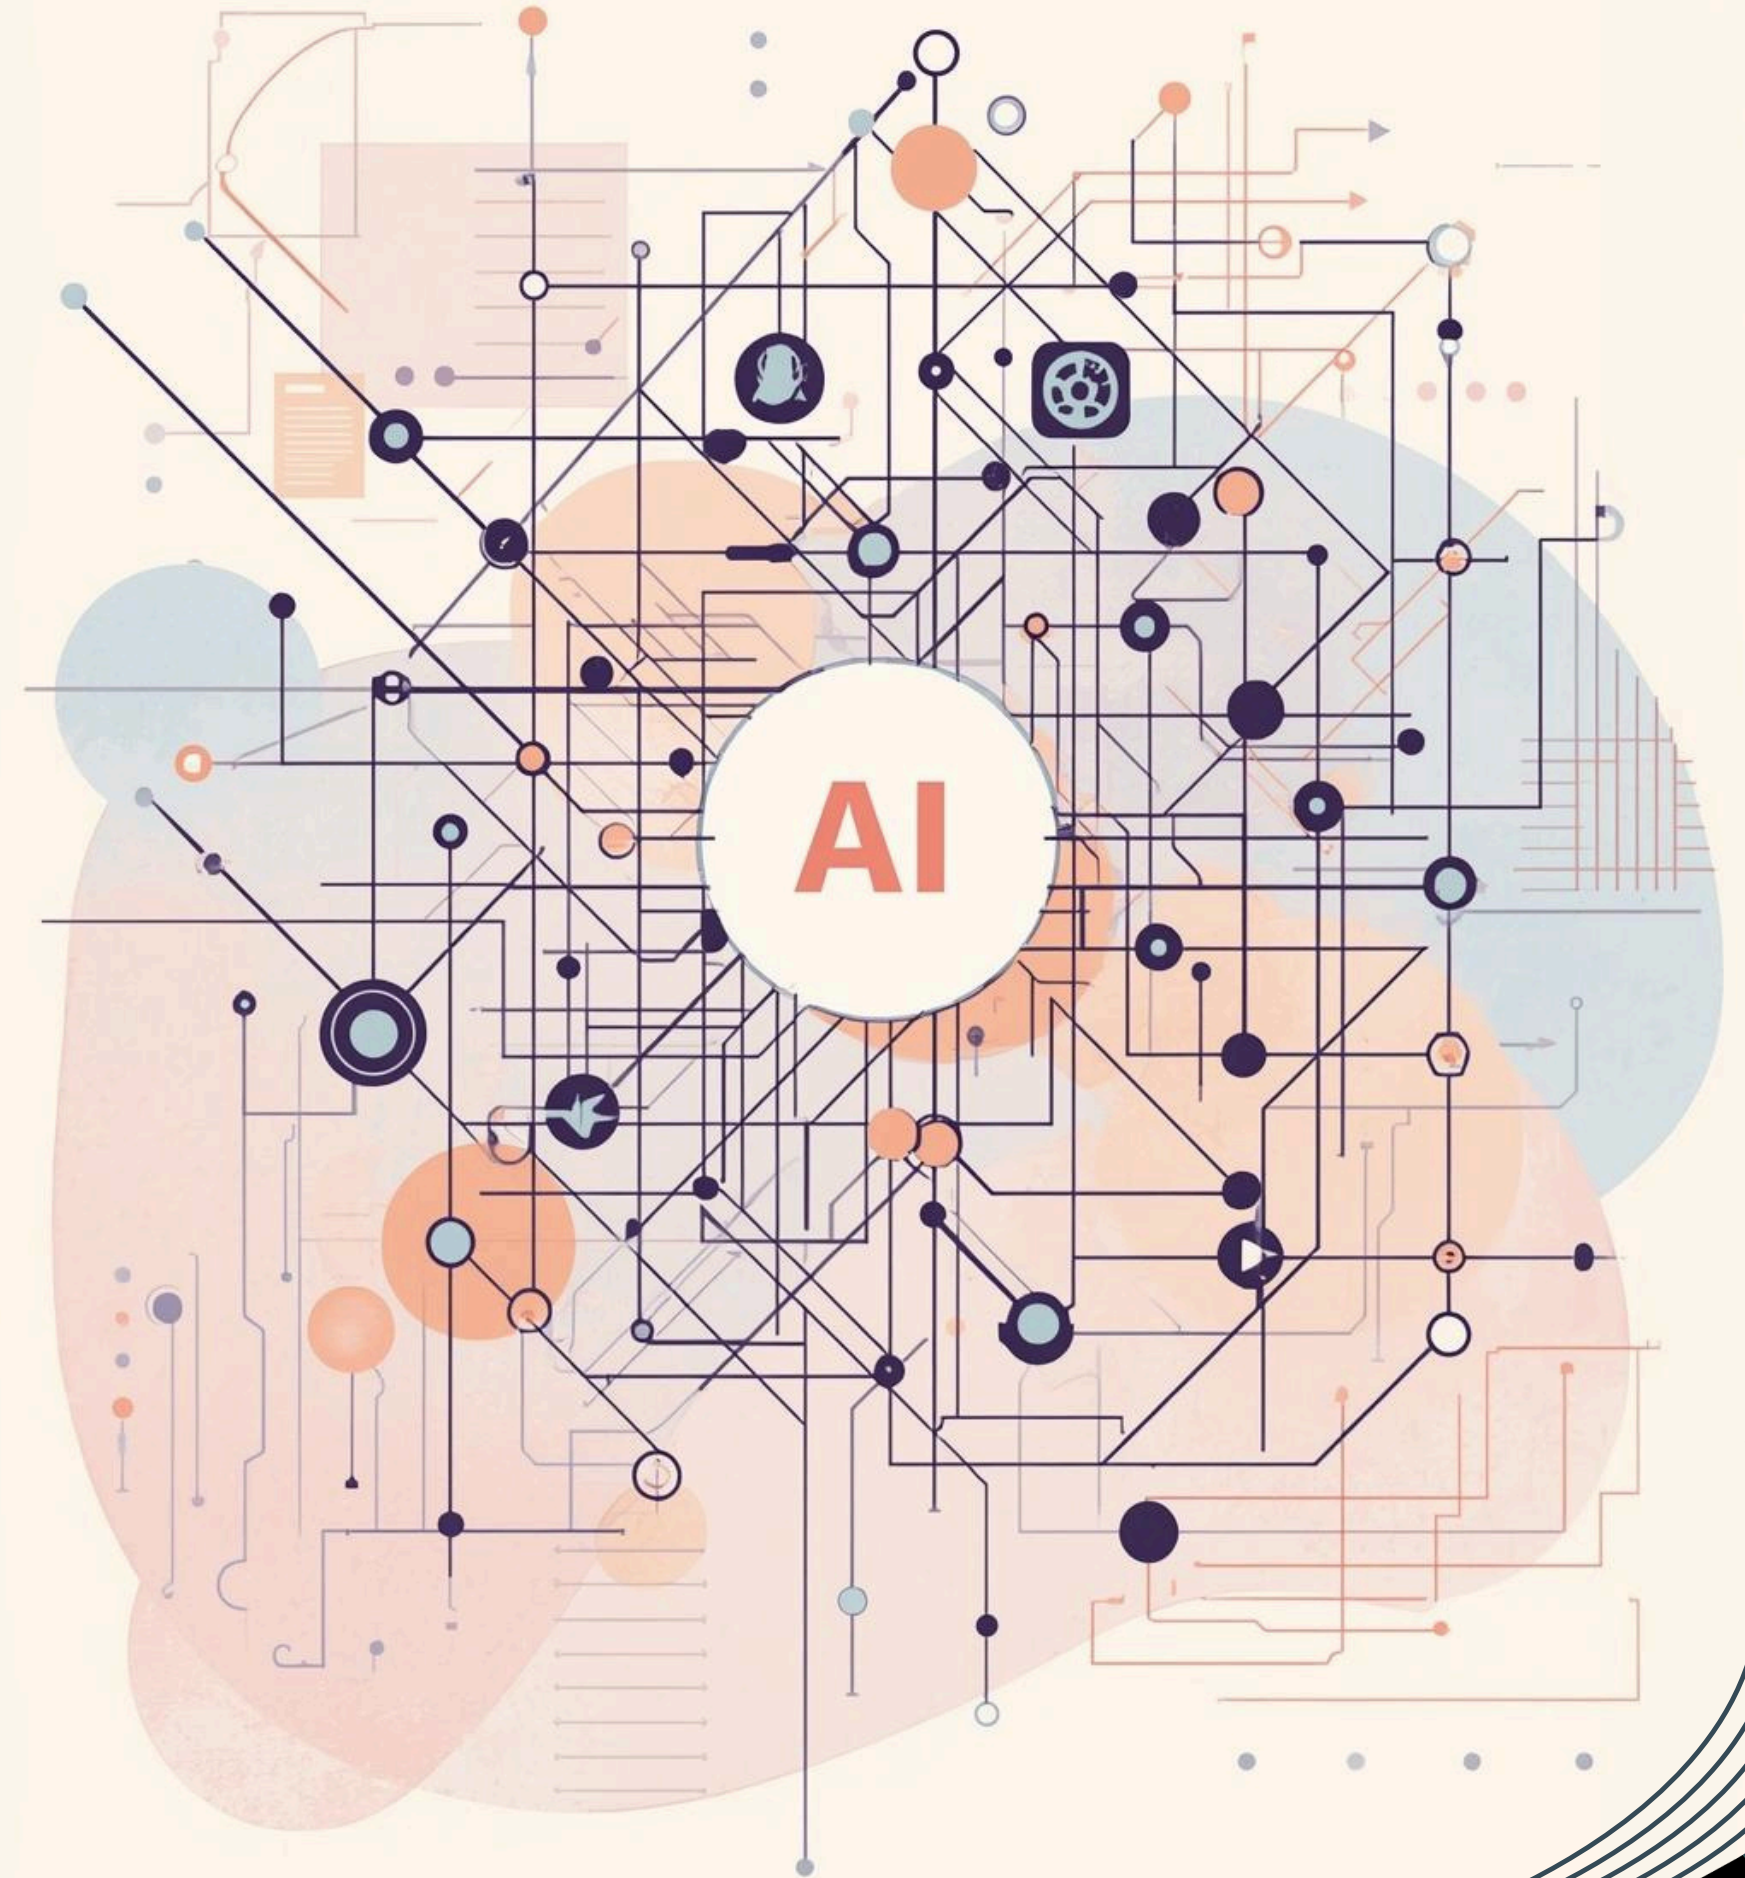

INCIDENT RESPONSE PROCEDURES

! ALERT

Ethics is ...

- A professional obligation
- A governance discipline
- A leadership responsibility
- A career-defining choice

Ethics is ...

The real test of ethical understanding is not:
“Can you define fairness?”

It is - “What will you do when fairness conflicts
with profit, pressure, or power?”
