

Building Ethical Culture in Organizations

What Creates Ethical Culture

Leadership Signaling

- If leadership prioritizes growth over safety, culture will follow.
- Ethics must be modeled from the top.

Incentive Alignment

If employees are rewarded only for:

- Speed
- Scale
- Revenue

Then safety will be deprioritized.

Performance metrics must include:

- Risk reduction
- Compliance adherence
- Responsible AI metrics

Psychological Safety

Employees must feel safe to:

- Raise concerns
- Admit model failures
- Question decisions

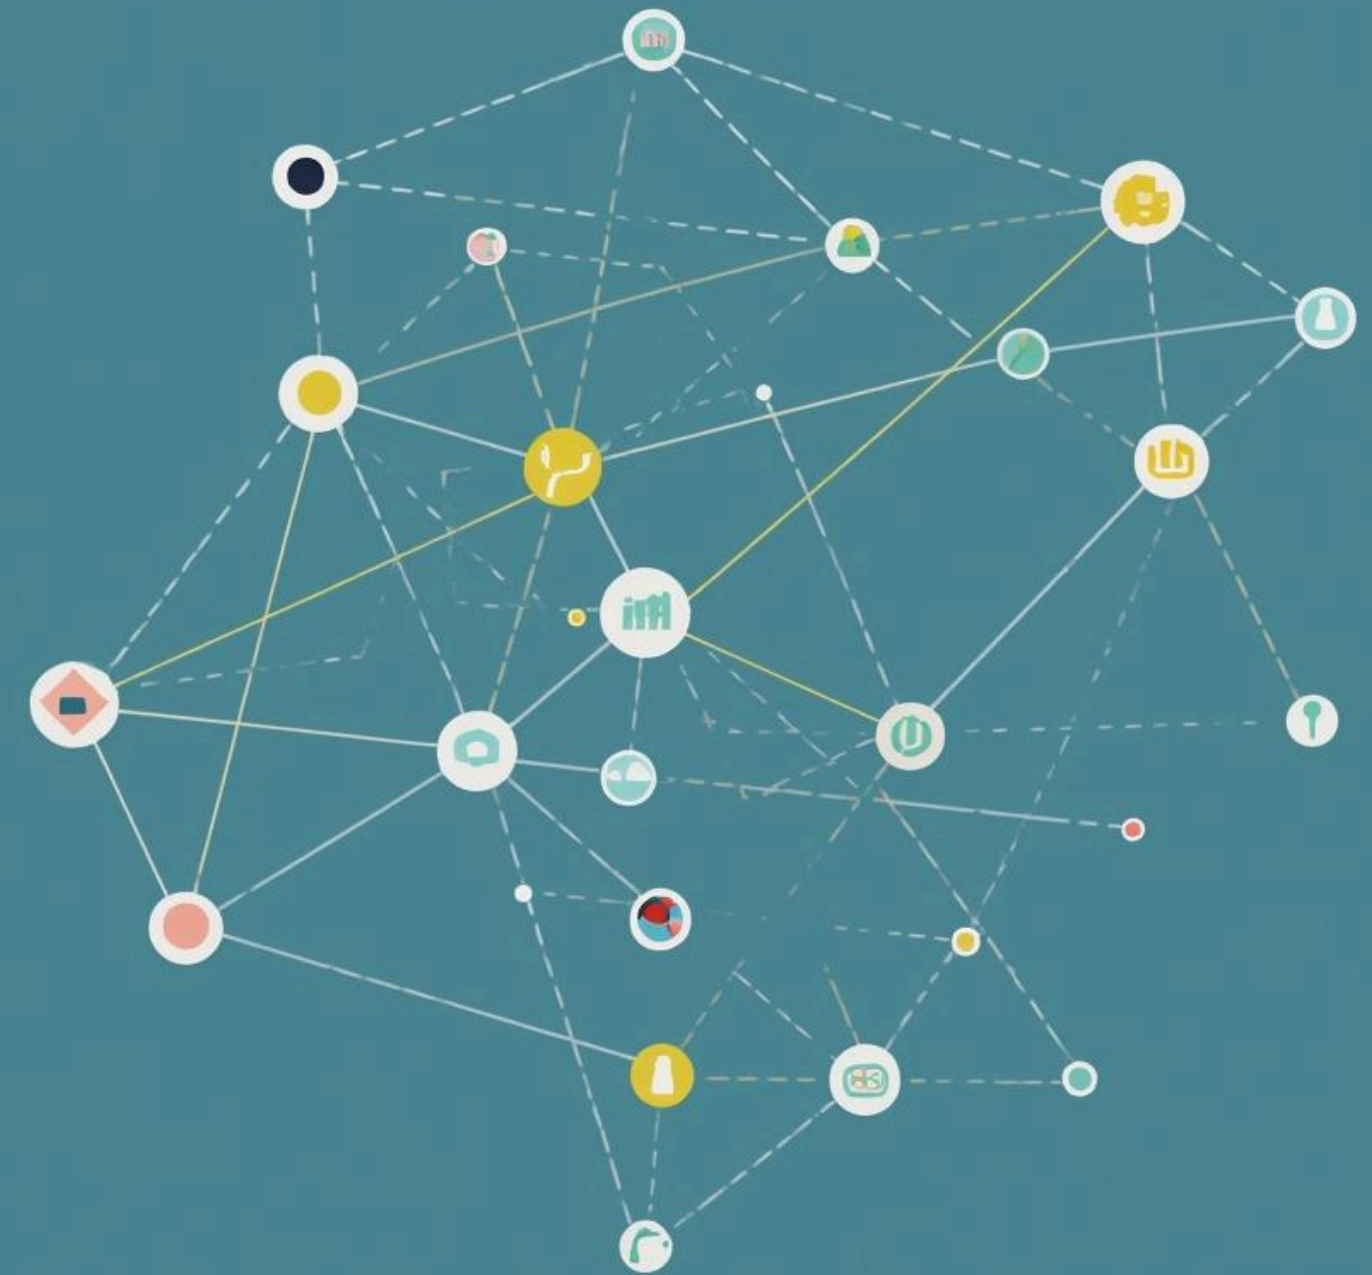

Without psychological safety, ethics collapses.

Structural Oversight

- AI review boards
- Model risk committees
- Algorithmic audits
- Bias testing protocols

Ethics must be operationalized.

ETHICAL CULTURE
